Table2 has 10 id. I want to select the latest 1st, 2nd, 3rd and 4th value from table1, in the latest 1st, 2nd, 3rd and 4th row of table2. I need to generate output like this: 1st_data 2nd_data 3rd_data 4th_data 3rd_data 4th_data 1st_data How to I do that? A: You should try to avoid using nested select queries. But if you need to you can use ROW_NUMBER window function and an order by: select t1.*, t2.* from (select t1.*, ROW_NUMBER() over(partition by id order by id) rn from table1 t1) t1 join (select t2.*, ROW_NUMBER() over(partition by id order by id) rn from table2 t2)
