## Terrain Sculpting Solution in Maya

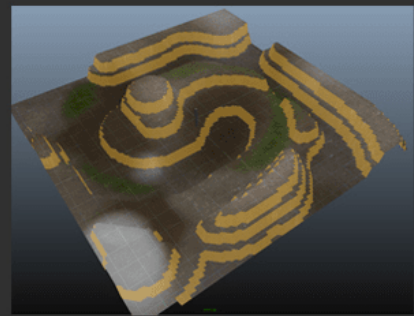

roryjones.net

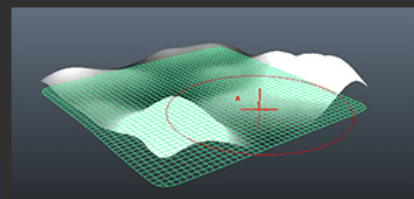

Due to the high resolution of our terrain and the importance of a performant, smooth editing experience the ability to quickly load and unload sections of the terrain was added.

### Terrain Painter HUD

- Brush size and strength
- Fixed-tier heights (-1 through 3)
- Smooth Brush (shift modifier)
- Subtract Brush (ctrl modifier)
- Material picker and mixture controls
- Falloff and custom brushes (added later)

This tiered mode allowed artists to quickly hit the correct heights for playable surfaces. A toggable view mode also highlighted steep drops and made terrain easier to read.

Rather than editing offsets to the mesh data the most performant method proved to utilize the vertex/weight painting tech Maya provides in conjunction with a custom vertex offset shader.
